

ABSTRACT OF THE DISCLOSURE

5 A portable digital communication device, in which it is convenient to manipulate
keys using fingers of both hands while chatting or playing a game. The device
comprises a main housing provided with a display unit on a top surface thereof, a first
key pad being capable of sliding on the top surface of the main housing in one direction
relative to the display unit so as to open and close one side of the display unit, and a
second key pad being capable of sliding on the top surface of the main housing in the
other direction relative to the display unit so as to open and close the other side of the
10 display unit and being capable of sliding toward or away from the first key pad.
